THE BEST DAIRY FEED

Made From Grain From Which the Human Food Values Have Been Taken.

By Prof. F. D. Fuller. [National Crop Improvement Service.]
The reason why the best dairy feeds are less expensive than the same grains on the farm is because the principal elements of human food are taken from these grains before they are ever made into feed. The byproducts of cereal mills, glucose factories, malt houses, etc., constitute often more than 50 per cent of the total bulk of mixed dairy feeds of the

better class. These oats, barley and corn byproducts are considered by experts in animal nutrition as very valuable feed materials. After these cereals are ground in the manufacture of alcohol, for which the use is growing more important daily in the arts, the solid residue is dried in vacuo, and is then known as "dried grains." If made from corn, these grains contain on an average of about 30 per cent crude protein and 10 per cent crude fat. If made from rye, while valuable, they are of somewhat lower feed value. The barley residue contains over 70 per cent more crude protein than wheat bran and twice as much crude fat. In fact, their food value is largely increased by the process.

All these products are widely used by the best dairy feeders and are relied upon very extensively in milk production. There is no doubt of the fact that if the supply of these prodexhausted, it would have a serious effect upon the milk production den added to their already overtaxed the troops were sent home.

HOME MIXED FEEDS.

own rations, what does he do? He buys straight feeds. Take cottonseed meal as a common example. There are a great many different grades of cottonseed meal, and the man who is cheap feeding ingredients has caused the quality to be gradually whittled down. Consequently the farmer nearly always works with feeds which are poorer than he believes them to be. He does not get adequate state protection because inspectors do not go to a farmer's barn to draw samples, and even if they did, it would be hard to get a complete chain of evi-

A farmer has no facilities for having his feed analyzed and he doesn't know what he is working with. The analyses of mixed feeds costs about ten cents per ton, and if every farmer will read the various bulletins from the agricultural colleges he will soon know those brands which can be depended upon. There is no doubt that at the present prices of grain any farmer can save money by selling his cereal crops and buying mixed feed. Cornmeal, oil meal and cottonseed meal are all high, but the by-products of barley and rye are all more reasonable in price.

Corn has become costly largely due to the demand for pork and beef. Americans will have those meats at almost any price. This puts corn on a meat basis, and the dairy business will have to fall back on the by-products of grains.

GIVE COWS PLENTY OF WATER

[National Crop Improvement Service When cows are in full milk they require plenty of water. It is stated authoritatively that cows in full flow of milk will consume 50 per cent more water than when dry.

Poor feed sells to poor feeders.

Only that part of the feed that digest is of use-the rest is mostly fertilizer material.

No protein-no casein; no caseinno milk; not enough protein-not so much milk; also not enough feed-not so much food.

Foods with the highest protein and highest analysis are usually but not always the cheapest to use.

Cows won't make milk out of water and air.

[National Crop Improvement Service.] Starchy feeds like corn and oats often sell as high as protein feeds because of the demand for them, for horses and other work animals. Starchy feeds are also good to fatten steers. That is why they are often as high in price as dairy feeds, which are strong in protein.

[National Crop Improvement Servi Home-grown grains can often be profitably traded for protein feeds. While oats are generally demanded for horse feed, they are nearly always too expensive for dairy feed. Oats by-products, however, are very useful for

MEN WHO FIRED LAST SHOTS OF THE WAR AFTERWARD MET

COLUMBUS (Ohlo) man claims to have fired the last shot of the war of Secession-David N. Osyor, the Columbus Dispatch states. He was a member of Company F. Ninth Ohio cavalry. On the morning of April 17, 1865, that command was near Durham Station, N. C. It was keeping close watch on Gen. Joe Wheeler's cavalry, which was on the opposite side of an extensive swamp. Part of the Union cavalry was ordered to dismount and wade across the swamp to distract the Confederates, while the rest constructed a corduroy bridge. They used their carbines so vigorously that the Confederates surmised that a very considerable force was coming at them, and the road builders got along fine with their bridge.

Near the other edge of the swamp Osyor says a Confederate bullet just clipped his sergeant's chevron and the skin on his arm. Looking for the source of the bullet, he spied the long barrel of a gun and the gray legs of a Confederate soldier in the forks of a tree in front of him, and he fired at them. He saw the legs withdrawn and the owner of them crawl slowly

Just then a flag of truce came in sight and the Union men were ordered ucts were radically limited or entirely to cease firing. The occurrence, Osyor said, did not impress him at the time, but that flag of truce was really the throughout the country and the sign of the end of the Civil war, for dairymen would have one more bur- the general surrender came soon and

A strange part of the story is that Cottonseed meal is composed prin- long after the war Osyor met at Bircipally of the kernel, with such por- mingham, Ala., a man named Amos tion of the hull as is necessary in the Thompson, who was lame-said he manufacture of oil. Cottonseed meal, had been wounded in the Confederate if choice, must contain at least 41 per service and, comparing notes, they escent crude protein. It is one of the tablished to the satisfaction of both richest of all feeds in this substance that Thompson was the man who was and carries about 8 per cent crude in the tree on the edge of the Durham On account of its extreme con- swamp back in 1865, had shot at Osyor June 25th. centration it can be fed only in lim- and been shot in turn by him. Osyor's ited quantities and always in con- bullet struck Thompson in the knee junction with some products to fur- and made him a cripple for life. They nish bulk. This meal is an important agreed that they had fired the very ingredient in many manufactured last shot on each side in the Civil war.

PROBATE COURT PROCEEDINGS.
